

# Built Green™ Builder Training

This course contains an in-depth review of building science issues and detailed discussion of sound building practice. This course is compulsory to become a certified Built Green™ BC Builder and a licensed R-2000 Builder.

## Course Content:

Introduction to the house as a system;

- Building science principles, including heat, moisture and air flows in buildings;
- Building envelope construction, including advanced framing techniques that save money;
- Air and vapour barrier systems, new options in air barrier materials and methods;
- Secrets to preventing condensation and moisture movement;
- How to build better foundations and avoid common basement problems;
- Energy efficient window technology, and how better windows can improve comfort;
- Mechanical systems for indoor air quality, moisture and mould management and comfort;
- cost effective ventilation solutions;
- Built Green™ Checklist and enrolment procedures
- quality assurance procedures
- How Built Green™ can increase sales and profits;

## Duration:

Two days in Class- see the website for full details on all Policies and Procedures, including our Refund Policy.
